Step 1: Open Windows PowerShell and run the following command – `docker run -d --name sonarqube-test1 -e SONAR_ES_BOOTSTRAP_CHECKS_DISABLE=true -p 9000:9000 sonarqube:latest`

```
PowerShell does not load commands from the current location by default. If you trust this command, instead type: ".\sonar-scanner.bat". See "get-help about_Command_Precedence" for more details.

**Freestyle project**
Classic, general-purpose job type that checks out from up to one SCM, executes build steps serially, followed by post-build steps like archiving artifacts and sending email notifications.

**Maven project**
Build a maven project. Jenkins takes advantage of your POM files and drastically reduces the configuration.

**Pipeline**
Orchestrates long-running activities that can span multiple build agents. Suitable for building pipelines (formerly known as workflows) and/or organizing complex activities that do not easily fit in free-style job type.

**Multi-configuration project**
Suitable for projects that need a large number of different configurations, such as testing on multiple environments, platform-specific builds, etc.

**Folder**
Creates a container that stores nested items in it. Useful for grouping things together. Unlike view, which is just a filter, a folder creates a

Under Pipeline Script, enter the following -

Output:

The screenshot displays the SonarQube web interface for a project named 'sonarqube-test1'. The main section shows a 'Quality Gate' status of 'Passed' with a green checkmark. A warning message indicates 'The last analysis has warnings. See details'. The dashboard includes several metrics:

- Security:** 0 Open issues, Grade A.
- Reliability:** 0 Open issues, Grade A.
- Maintainability:** 0 Open issues, Grade A.
- Accepted issues:** 0.
- Coverage:** 0.0%.
- Duplications:** 0.0%.

The interface also shows a 'New Code' and 'Overall Code' tab, and a 'Set as homepage' button.
